1. State the educational purpose of the assessment program:

Students graduating with a degree in graphic design will have a more highly specialized technical and business visual art education, which cultivates the ability to think originally and inventively within the creative possibilities of the graphic media used in mass-market communication. Students will also: exhibit an understanding of the theory and history of the visual arts; show proficiency in techniques of fine and applied arts; have visual awareness and sensitivity to society and culture and the artist’s responsibility within it; be dedicated to the mission of art and design; and have a discerning judgment of values, both in art and in life.

Students are assessed to determine if these criteria of the program are being fulfilled from when they entered college to when they complete their degree.
